

Abstract of the Disclosure

The systems described herein include one or more wireless vehicle detectors, along with a distributed parking payment system such as parking meters or a paystation.

5 Information from the payment system and the vehicle detectors may be combined to determine when a parking violation occurs, or is about to occur. This information may then be transmitted through a communication system to a parking enforcement officer, along with information about the geographic location of the violation. The information may also, or instead be transmitted to a parking payer to notify the payer of an impending infraction so that the payer may purchase additional parking time before the violation.
